GShock is an abbreviation for Gravitational Shock. The watches in the GShock line are designed primarily for sports, military and outdoorsoriented activities; nearly all Gshocks are digital or a combination of analog and digital and have a stopwatch feature, countdown timer, electroluminescent backlight and 200metres of water resistance.During a visit to a playground, Ibe discovered that in a rubber ball, the centre of the ball doesnt suffer the effects of the shock during a bounce on a rough surface which gave him the idea to implement that concept into the watch.Sales were sluggish in Japan as people preferred dress watches. In order to promote the GShock worldwide, the American division of Casio released a commercial in which an ice hockey player used the DW5000C as a hockey puck to demonstrate the toughness of the watch. The commercial gained negative publicity and Casio was accused of false advertising. A TV news channel then set out to conduct live tests on the DW5000C to check whether it was as tough and durable as advertised. This involved repeating the action shown in the commercial. The DW5000C survived the impact of the hockey stick, and the GShock gained popularity among the general public. The popularity of GShocks increased throughout the 1990s.<http://sirinthepgroup.com/userfiles/buick-century-manual-pdf.xml>

Many newer models feature metal steel or titanium bands and a mix of analogdigital timekeeping, analog timekeeping or digital timekeeping.New limited models are introduced more frequently through the year. Special models are released upon the anniversary celebration of the G Shock brand and are sold through selected retail channels. Ex Special ForcesBritish SAS soldier Andy McNab mentions in several of his novels how his character Nick Stone relies on a GShock watch. According to Mark Bowden s book Blackhawk Down, the DELTA Operators wore GShock watches during the combat events of 3 and 4 October 1993.Some include Tough Solar battery charging and Multiband 6 time synchronisation through radio signals from six transmission stations worldwide. The MTGS1000, GWA1000, and GPW1000 feature Triple G Resist which includes resistance to shock, centrifugal gravity, and vibration. In 2014, Casio introduced the GPS Hybrid Wave Ceptor feature in the GPW1000 Gravitymaster that allows the watch to synchronize the time through GPS signals and also adjusts the time zone automatically.The GPRB1000 is a GPS Hybrid Wave Ceptor model which relies on GPS and atomic time keeping in order to keep perfect time. The model also has triple sensors altimeter, barometer and compass as well as a backtracking function which allows the user to return to the same point from where he started the journey by the use of a map, a function which was previously exclusive for Casios ProTrek line of watches. The watch also features Bluetooth connectivity which allows it to connect to a smart phone via an app and allows it to upload log data in the phone, download map information from the phone and also synchronise itself with the phone in order to keep perfect time. The watch comes without a replaceable battery.<http://www.newgo.ru/media/buick-century-owners-manual-2003.xml>

The following is a list of the six atomic time transmittersThis is the newest additional signal; older

multiband 5 watches will not be able to connect to this signal, and must be upgraded to a newer multiband 6 watch in order to synchronise from there. These models were the very first GShock watches to have a countdown timer. The countdown timers on these models were designed to count down for surfing competitions, some of the later models have a yacht timer, moon and tide graphs so a surfer can keep track of the progress while competing on the water. Many of these models came equipped with a pair of strap adapters and a single onepiece resin or nylon band. Resin bands for these models had open gaps or slits through the band. Casio refers to them as drainage slits; the idea is that water will drain out with no problems while in action when surfing. Most of these series models had a translucent band. These models were branded as XTreme for the Japanese domestic market. They were designed for snowboarding and skateboarding competitors and competitions. The only difference is that these models came with nylon velcro bands. Retrieved 23 December 2019. By using this site, you agree to the Terms of Use and Privacy Policy. Syncs with the Atomic Clock so you never have to adjust the time or date and it's charged via solar energy so you never have to worry about changing the battery. Watch is in fabulous condition and all functions still work. See pictures for a lume shot and with the amber led backlighting. NOTE The manual is inside the watch box; You have to pull up the inner packaging and it will be on the bottom of the box.

No box or manual are included, however the manual can be found online. The watch has been in a drawer in powersaving mode for the last 6 months, so have charged the battery and synced the time over the air, and has been working fine since. As stated below, the watch is used and has been worn, but is still in great condition. If you would like any more details about the condition, or would like any other photos, please ask.. I decided to purchase the AWG1011A because I have always liked the look of an analog watch over a digital. There are just a couple of minor things about the watch that I don't like that kept me from giving this watch 5 stars. The light is almost useless. In a dark environment you cannot read the digital display at all that shows the date and the seconds. And the other being that this is an analog watch, there is no second hand. It's not a deal breaker for me, but it would have been nice. I really like everything else about the watch. It's not really bulky like the GW300, and it's not heavy feeling either. They have been producing watches with great functionality built in and great quality. I bought this watch because of a couple of reasons Looks, Solar, dual Analog and Digital. Everything is fine with some major downsides which I want to highlight 1. Digital circles do not get illuminated when using light. So during night or at dark places, only analog can be viewed. 2.

From functionality purpose, Casio have totally misused the dials. First dial left most tells the time, date, day etc; second right most tells the second progress and third center down IS USELESS. This third one shows which Atomic center is used for automatic time receiving. First of all why the hell I should be knowing which area is used to receive atomic signal Secondly if Casio wanted to give this functionality, why can't it be part of any other dial, why used one dial only for this purpose Third, in my watch this third dial is all black I mean I don't even know if my watch atomic functionality is correctly working. If any other user know what is the issue or if I am not using it properly, please let me know. I chose this watch instead of more popular AWG101 white dial one just because of looks. From outside, this looks more cool, but now I can make out why other people have chosen that

instead of this. Please try again later. Ashish Agrawal 2.0 out of 5 stars They have been producing watches with great functionality built in and great quality. ChrisH67 4.0 out of 5 stars I decided to purchase the AWG1011A because I have always liked the look of an analog watch over a digital. Its not really bulky like the GW300, and its not heavy feeling either. Please try again later. Please try again later. J. Vendegna 4.0 out of 5 stars Ive worn it everyday since the day it arrived and it has never let me down. The solar feature is amazing. Ive had a couple of GShocks before this and my biggest problem was always the battery would eventually die. I never have had that problem. The atomic timekeeping is great too. I enjoy knowing the time on my watch is always correct. This watch is very tough and has been with me in a lot of rough situations. There are only two reasons I didnt give this 5 stars.

First, Im on my third band and will soon need a new one. The original band lasted 4 years, the subsequent two were not made by Casio and have each lasted two years. I guess 4 years isnt bad, but my old GShocks never needed new bands. The only other issue is the backlight is dismal. The only thing its good for is providing enough light so the glow in the dark paints on the hands can shine and you can read it like that. Other than that, great watch. I will use this watch until Casio releases a GShock smart watch, and even then, Ill still use this watch. Please try again later. Please try again later. S 5.0 out of 5 stars Its strong and tough. I check its accuracy against an atomic clock on the wall opposite my computer and I can count on it being the identical time to the second. The radio control comes from the national time center in Fort Collins, Colorado. This watch has a number of other functions as well including stop watch, timer, day and date, etc. Furthermore, its most significant feature to me is the fact that it is an analog with the old fashioned hands as a read out of the current time. This watch is quite affordable at Amazon.Com and a real joy to own. SMS Please try again later. Please try again later. Michael N Mikulaninec 4.0 out of 5 stars It stays charged automatically and keeps time well. The little LCD windows for data are hard to see. I need good light and I have to get it close to my face. The LED light for the dial does NOT illuminate the LCD windows. You cannot see them in the dark without a separate source of illumination. The synchronization feature where it checks an atomic clock almost never works for me. Its synced automatically probably three times in a year. I set the zone right and tried leaving it next to various windows and in various positions with no luck. I followed the instructions. There are a lot of menus and settings, and if youre like me you will probably need a glance at the instruction sheet every time you need to make a change.

Im happy with it overall but dissatisfied with the atomic sync feature and visibility of the LCDs. Please try again later. Please try again later. L. Herrmann 5.0 out of 5 stars It was very easy to set up, although the manual is small and has really small print. Out of the box to on my wrist was probably 10 minutes. Since then it has endured salt water, lake water as well as just everyday use. The dial is very easy to read, and the night viewing is also good with the LED illumination. But those would all probably add to the price and for what I paid, I am very happy. Please try again later. Please try again later. Guevara Family 4.0 out of 5 stars The atomic timekeeping works great, i set the timezone and it takes a few minutes to set itself, but the time is on spot, which is great. i love this watch my only concern was that i was led to believe the digital screens were illuminated, but i may have read wrong, thats the only reason its getting 4 stars instead of 5. Please try again later. Please try again later. Matt F 5.0 out of 5 stars Pulled it out of the box and watched it spring to life as it hit the daylight and landed on the exact time due to the atomic timekeeping feature. This is a very attractive GShock on the wrist, and so far very durable and comfortable. I ran the Zombie 5k RunForYourLives in it, and came through without a scratch on the watch. I wasnt so lucky. My nephew also loves to gnaw on it when I hold him, and it still looks brand new. The band is one of the most comfortable urethane watch bands Ive had the pleasure of experiencing. Lowest price I could find online. Please try again later. Please try again later. lutzfuji 5.0 out of 5 stars I also tend to

research a lot of watches before picking out one. Anyhoo I was on a sports watch thing this past few weeks and I finally decided to purchase a G-Shock watch. For those who are wondering the bezel area that has G-Shock on it is a dark dark grey, kinda matte grey.

Some of the pictures makes it look kinda purple. Also the dial of the watch is a dark grey and in the light it still shines a dark grey could pass as a light light black color. Hope that helps people pick out this watch because I found myself comparing a lot of photos and was worried that I wouldn't like the bezel color. I absolutely love it, looks like a high quality piece. As far as usability. Take it out it sets itself as far as date and atomic syncing of time. All you have to do is hit a few buttons and set your home time zone, and then set Daylight savings time or standard time and you're good to go. The manual is easy as pie to read and pictures tell you what button to hit. The only confusing part for people is that sometimes you have to reference multiple pages. Definitely a easy watch to set up. Please try again later. Please try again later. Noisemaker 4.0 out of 5 stars I wanted it to need little attention from me, so solar power and atomic timekeeping were important to me. This watch has all that and looks good, too. The price is very reasonable for all the features this watch has. Only a few things keep me from giving it a perfect review The hands sometimes cover up the smaller dials, thereby hiding information such as date, alarm time, etc. The LED backlight does not illuminate the smaller dials, so reading them after dark is impossible without an external light source The bottom small dial is wasted to display information I will never need to know basically, which continent I'm on I wish it had more than one alarm In spite of those issues, I love this watch and would buy it again if needed. Please try again later. Please try again later. I figured out how to get the analog hands to move, but can't get the digital display to sync up. Without a manual, I'm. I no longer have the manual for it. You can get instructions from the Casio web site. Answer questions, earn points and help others.

Auto synch works occasionally, which is fine as long as you never travel out of your time zone. Manual synch, which is the only way you can change time when traveling, has literally NEVER worked. I had to quit using this watch when I traveled because of the poor performance in this regard. Time setting was much easier than other Casio Atomics I've owned hands moved much quicker to the correct time. Being able to receive UTC signals from multiple transmitter frequencies is a huge plus. Light is bright and Solar Charging a huge plus. In addition to the good points, it is also Waterproof Various water sports, snorkelling being the deepest.
