Buttons feel very nice to press. Big characters on display great for my 87 year old mother. The diamond sign for note entry or subtotal is great feature. Once you are used to this it is handy but a bit confusing at first. Not obvious if you don't know it and don't read the directions. Great device. Came quickly and had AC adapter, with ribbon and a little roll of tape for printing on. I love it. We used it at least 3 4 times each week for such tasks as balancing our checking account against that posted electronically by the bank. The new printer calculator is very similar to the original but there are some minor changes. The printer provides very legible characters and generic replacement ink rollers can be purchased from Amazon at a reasonable price. Not a Calculator. Lots of functions for the general accounting that I, as a PTO Treasurer, am tasked with accomplishing. It can run on battery or electricity and the cord is decently long. It can also give you a total of items added up when you total the amount, which is helpful when handling 100s of checks during fundraising events for example you have 72 checks on a tape, and it will print a 72 out to the left of the total amount. Those sound like very simple needs, and they are, but those functions save me TONS of time when I have to run two tapes on each deposit. Prints very well, also. The only button that responds when pressed is the FEED button. All other buttons are completely unresponsive.

My original review So far so good with this product. The only thing I don't care for is the auto shut off after approx 5 minutes. I've been meaning to look at the manual to see if there's a way to deactivate that feature but haven't had the time to look into it yet. I gave this 4 stars because the instructions are insufficient and too early to rate reliability. The instructions are cryptic but Canon customer service quickly responded to my email. In the following review, we are going to take a look at the features, specs, pros, and cons of the Canon P23DH V. You will soon see why this particular calculator is an exceptional choice for any and all of your calculation needs. Better yet, there is a builtin battery strength indicator that lets you know when the batteries are starting to run low. Time calculation is by far the most unique highlight of this calculator, enabling users to speedily crunch numbers for a timebased fee. The Canon P23DH V is an allaround great unit and the portability it offers is a nice touch as well. Some of the keyboard functions are a bit different as well. For example, the equal sign does not result in a proper answer as is typical on a scientific calculator. Despite these few issues, users love the intuitive printer feature and the fact that the calculator can operate without printing, if so desired. The stable build is another main highlight of this great unit. If your job does require you to maintain reliable performance while on the go, this unit could be your perfect match. If you decide to get your hands on the Canon P23DH V, drop us a comment down below and let us know about some of your favorite features. Notify me of new posts by email. Please try again I gave this 4 stars because the instruction are insufficient and to early to rate reliability. Please try again I have had this same model of calculator for probably 15 yrs, never a problem. Recently the printout is impossible to read even after changing the ink. I assume it is wearing out, I have certainly gotten my moneys worth. Why the one star I received the 1st replacement and immediately it was printing weird, putting in numbers that I didnt. The digital display was correct but the tape was crazy. Symbols, numbers, division sign when it was an add, etc. Then the E error displayed and it wouldnt reset or do anything. Oh well probably faulty. Received it just fine. Took it for a test and again display was odd and after 30 seconds. So I have 2 to return. Im sure it is a bad batch because my original was tried and true for years. I think I will wait to reorder or go with a different model. If you order hope you have better luck! Sorry, we failed to record your vote. Please try again I purchased this calculator because I had a Casio that I bought in a retail outlet that required me to enter the decimal for every entry involving money. Worthless! THIS calculator adds money values and automatically enters the decimal in the right place, AND, it cost less than the Casio. The key spacing is good for quick entry, the printer is not too noisy, and it has features that exceed my requirements. You cant go wrong. Sorry, we failed to record your vote.

Please try again The case is bulged out at the sides and front, and the effect is more Rubenesque than streamlined compared to the slabsided III. Like most electronics these days, its made in China. But, I have no complaints about the adding machine itself. The materials and construction quality seem about as good as my older machine which also was made in China, and died after a long life of moderate service. The 5 key has a fairly subtle raised circle my fingers have a hard time picking it up, but then, I dont spend a lot of time with it. And, this machine does time calculations punch in start and end times, and itll tell you the difference in hours and minutes. Its an adding machine, with

some calculator functions, thereby confusing users of both devices. Sorry, we failed to record your vote. Please try again I've bought this model from other vendors before, and have not had any problems. According to the Canon web site, there is a one year warranty so I'll be asking to have these replaced under warranty. Sorry, we failed to record your vote. Please try again I hate the ordinary calculators that require a lot of entering. I prefer adding positive and negative numbers. A small difference, but much faster. The percentage keys calculate then add or subtract that amount with one button. The decimals can be placed two places to the left so that you don't have to enter the decimal every time when dealing with money. The one I'm replacing still works after 10 years, but I lost the battery cover. Sorry, we failed to record your vote. Please try again.
